

## **Highlights of the Hospital Evacuation Survey conducted by NHA 2008**

25 responses were received from the 58 hospitals in Nevada

Only 40% of respondents have a notification process for the public in case of evacuation

92% report having a plan for sheltering in place

96% report having an evacuation plan

68% are integrated in local jurisdiction's evacuation plan

Less than 48% report having a system/plan in place to transport patients

60% have a plan to track their staff

32% of the plans do not identify transportation needs/priorities

Only 7 hospitals reported having plans to address isolation and quarantined patients

13 hospitals report having MOUs and MAAs with other hospitals in place to address evac

9 report having them in place with other health care providers/facilities

9 report having them specifically for patient transport
